Acurado hazardous substance cabinets.

Tested protection. Safe storage.

Whether in agriculture, on a municipal works site, in a workshop, in industry and manufacturing, or in a laboratory: wherever plant protection products, oils, solvents or other substances hazardous to water are stored, a safe and reliable solution is essential.

C + P hazardous substance cabinets combine tested collection trays with robust steel construction and a contemporary design. All models are manufactured to a uniform standard with an optimised ventilation pattern and even greater safety features.

NEW: now with a **general building authority approval** from the **German Institute for Building Technology** – DIBt. **Approval number: Z-38.5-368**

Your benefits at a glance:

+ **Tested:** General type approval from the DIBt
+ **Safe:** Every collection tray is manufactured in accordance with StawaR (Steel Spill Tray Directive) and individually tested for leaks
+ **Safe containment:** Reliable containment of leaking water-polluting liquids
+ **Modern:** New ventilation hole pattern for a contemporary, high-quality appearance
+ **Versatile:** Five sizes for different applications and room layouts
+ **Great value for money:** Improved design at the same price

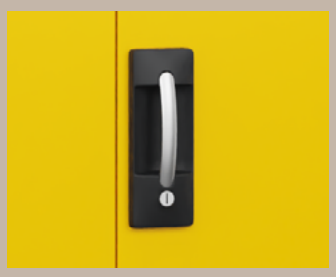

Clearly marked:
The new, highly visible door stickers display important safety rules directly on the cabinet. These clear prohibition signs thus help to ensure safe and compliant use in day-to-day work.

Visibly refined:
The new ventilation pattern not only ensures the necessary ventilation of the cabinet interior, but also gives the hazardous substance cabinets a more modern and clean-cut appearance.

Safely caught:
These collections trays, which have been further developed in terms of both design and manufacturing processes, are designed to safely contain any spilled liquids. Each tray is individually tested for leaks during the manufacturing process.

Securely locked:
The Ergo-Lock grip lock with a 3-bolt latch ensures high levels of operation safety, good ergonomics and an attractive appearance. Supplied as standard with 2 keys; also available with an exchangeable cylinder as an option.

Der Stahlschrank.

Safe containment.
Steel collection tray in accordance with StawaR – liquid-tight welded and cold-galvanised. For the safe and reliable containment of spilled liquids and water-polluting substances.

All models for different applications

1.000 × 500 × 500 mm
The compact, single-door solution for smaller quantities and limited space.
Collection volume = **10 litres / tray**

1.000 × 930 × 500 mm
This low, two-door hazardous substance cabinet offers more storage space and is ideal for the organised storage of various containers.
Collection volume = **20 litres / tray**

1.950 × 500 × 500 mm
This tall, slender model makes optimum use of the available space and offers plenty of storage space whilst taking up minimal floor space.
Collection volume = **10 litres / tray**

1.950 × 930 × 500 mm
The spacious, two-door hazardous substance cabinet is a versatile solution for larger quantities of water-polluting substances.
Collection volume = 20 litres / tray

1.950 × 1000 × 500 mm
This model offers maximum storage space and excellent visibility for large stock quantities.
Collection volume = **20 litres / tray**
